PV—let me know if this is what you wanted. You still need to make a call about the study that had the viral infection... with the lymphoma. I added the text to describe it. You just need to decide whether it is equivocal evidence or conclude the study is compromised (like we did with CARC) and not use it in a WOE.

I added the other tumor tables and text to describe. Also I added the PWG info. I still don't have a reference...
